---

Version 0.5 :

- Add support for including template files in template, by using keyword 'include'.
- Add some support for error reporting in template parsing.

Version 0.4 :

- Support for nested blocks (if inside list, list inside if, ...)
- 'ifnot' bug correction.

Version 0.3 :

- Support for same pattern in start and stop delimiters.

Version 0.2 :

- Support for simple 'if' condition bloc :  
Inside the if condition bloc the same name can be reused for a token.  
By doing that the bloc will be displayed only if the value is set.

Version 0.1 :

- Support for customisable delimiters
- Support for string template
- Support for file template
- Start of the class.
