PclZip 2.6 introduce new granular functions at the file level. You can now add a string as a file in an archive, without the need to create temporary files when a string need to be put in a zip archive.

PclZip 2.6 also correct some bugs.

User manual is not yet updated so you can find some informations bellow :

```
$archive = new PclZip("archive.zip");
$v_filename = "new_file.txt";
$v_content = "This is the content of file onenHello second line";
$list = $archive->create(array(
    array( PCLZIP_ATT_FILE_NAME => $v_filename,
          PCLZIP_ATT_FILE_CONTENT => $v_content
        )
    )
);
if ($list == 0) {
    die("ERROR : ".$archive->errorInfo(true). "");
}
```

The content of string "\$v_contenu" will be added in the archive as a file with name 'new_file.txt'.
