- Code optimisation
- New attributes `PCLZIP_ATT_FILE_COMMENT` gives the ability to add a comment for a specific file. (Don't really know if this is usefull)
- New attribute `PCLZIP_ATT_FILE_CONTENT` gives the ability to add a string as a file.
- New attribute `PCLZIP_ATT_FILE_MTIME` modify the timestamp associated with a file.

- Correct a bug. Files archived with a timestamp with 0h0m0s were extracted with current time
- Add CRC value in the informations returned back for each file after an action.
- Add missing `closedir()` statement.
- When adding a folder, and removing the path of this folder, files were incorrectly added with a '/' at the beginning. Which means files are related to root in unix systems. Corrected.
- Add conditional if before constant definition. This will allow users to redefine constants without changing the file, and then improve upgrade of pclzip code for new versions.
