Version 2.8.2 :

- PCLZIP_CB_PRE_EXTRACT and PCLZIP_CB_POST_EXTRACT are now supported with extraction as a string (PCLZIP_OPT_EXTRACT_AS_STRING). The string can also be modified in the post-extract call back.
- **Bugs** correction :
 - PCLZIP_OPT_REMOVE_ALL_PATH was not working correctly
 - Remove use of eval() and do direct call to callback functions
 - Correct support of 64bits systems (Thanks to WordPress team) .

Version 2.8.1 :

- Move option PCLZIP_OPT_BY_EREG to PCLZIP_OPT_BY_PREG because ereg() is deprecated in PHP 5.3. When using option PCLZIP_OPT_BY_EREG, PclZip will automatically replace it by PCLZIP_OPT_BY_PREG.

Version 2.8 :

- Improve extraction of zip archive for large files by using temporary files This feature is working like the one defined in r2.7. Options are renamed : PCLZIP_OPT_TEMP_FILE_ON, PCLZIP_OPT_TEMP_FILE_OFF, PCLZIP_OPT_TEMP_FILE_THRESHOLD
- Add a ratio constant PCLZIP_TEMPORARY_FILE_RATIO to configure the auto sense of temporary file use.
- Bug correction : Reduce filepath in returned file list to remove annoying './' preamble in file path.
